TOWA CORPORATION announces that "YPM1250-EPQ", which is our optimal equipment for manufacturing the generative AI semiconductor, received Grand Prix on semiconductor manufacturing equipment category at “Semiconductor of the Year 2024” held by Sangyo Times, Inc.

Electronic Device Industry News, which is published by Sangyo Times, holds "Semiconductor of the Year" every year and it marks its 30th anniversary this year. It recognizes products and technologies that have made the most significant contribution to the development of cutting edge electronics. It's criteria for selection includes originality in development, establishment of mass production systems, social impact and future potential.

"YPM1250-EPQ", which has won the Grand Prix for our company, is the industry's first equipment designed to handle chiplet products, which are expected to grow significantly in the future. Furthermore, it adopts a newly developed molding technology "Resin flow Control Method". It has been highly rated for meeting market demands amid increasing need to enhance the functionality and performance of semiconductors in back-end process.

In the future, we will continue to focus on "technological development", which is most demanded by industrial society and boldly challenge to the creation of new products and new goods with a quarter-lead approach, contributing to the development of the semiconductor industry.
